

ATTACKING CHALLENGING CLASS III CASES WITH PSL

Dr. Todd Bovenizer

GENERAL

This webinar offers approaches for treating malocclusions using solely PSL mechanics on cases that you may have previously determined needed extractions or surgery. Proper case setup along with torque selection, bite disarticulation, and early light elastics that shift the case outcome in the first 6 months and are key to optimal outcomes will be demonstrated. Finally, recommendations will be offered for staying engaged in the case treatment and reading and reacting using repositioning to obtain great results.

THEORY

Key Learning Objectives:

- Beginning with the end in mind: Torque Selection and simplified mechanics with PSL
- Bite disarticulation for rebuilding the occlusion with class III mechanics
- Incisor Retraction and space consolidation techniques
- Torque Selection errors and completing progress pan/repo appointments
- Addressing anchorage concerns by consolidating groups of teeth and continuing elastics
- Staying engaged with treatment and learning to flex in your treatment plan
